

# **LAB ASSIGNMENT-7.5**

NAME: M.Akshay patel

2303A51745

BATCH-11

Lab 7: Error Debugging with AI: Systematic approaches to finding and fixing bugs

Lab Objectives:

- To identify and correct syntax, logic, and runtime errors in

Week4 -Monday:

Python programs using AI tools.

- To understand common programming bugs and AI-assisted debugging suggestions.
- To evaluate how AI explains, detects, and fixes different types of coding errors.
- To build confidence in using AI to perform structured debugging practices.

Lab Outcomes (LOs): After completing this lab, students will be able to:

- Use AI tools to detect and correct syntax, logic, and runtime errors.
- Interpret AI-suggested bug fixes and explanations.
- Apply systematic debugging strategies supported by AI-generated insights.

Refactor buggy code using responsible and reliable programming patterns.

## **Task 1 (Mutable Default Argument – Function Bug)**

Task: Analyze given code where a mutable default argument causes unexpected behavior. Use AI to fix it.

```
# Bug: Mutable default argument  
def add_item(item, items=[]):  
    items.append(item)
```

```

return items

print(add_item(1))

print(add_item(2))

```

Expected Output: Corrected function avoids shared list bug.

```

# ass7.5.py > ...
def add_item(item, items=[]):
    items.append(item)
    return items
print(add_item(1))
print(add_item(2))
# The above code has a common pitfall in Python where the default mutable argument (items=[]) retains its state between function calls.
# To fix this, we should use None as the default value and initialize the list inside the function.
def add_item(item, items=None):
    if items is None:
        items = []
    items.append(item)
    return items
print(add_item(1))
print(add_item(2))

```

Output:

```

PS C:\Users\harik\My project> & C:/Users/harik/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/harik/My project/Assets/ass7.5.py"
[1]

[2]
PS C:\Users\harik\My project>

```

## Task 2 (Floating-Point Precision Error)

Task: Analyze given code where floating-point comparison fails.

Use AI to correct with tolerance.

```

# Bug: Floating point precision issue

def check_sum():

    return (0.1 + 0.2) == 0.3

print(check_sum())

```

Expected Output: Corrected function

```

ts > ass7.5.py > ...
def check_sum():
    return (0.1 + 0.2) == 0.3
print(check_sum())
# This will print False due to floating-point precision issues in Python.
# To fix this, we can use the round function to compare the values with a certain precision.
def check_sum_fixed():
    return round(0.1 + 0.2, 10) == round(0.3, 10)
print(check_sum_fixed())
# This will print True as the rounding resolves the precision issue.

```

Output:

```
PS C:\Users\harik\My project> & C:/Users/harik/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/harik/My project/Assets/ass7.5.py"
False
PS C:\Users\harik\My project> & C:/Users/harik/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/harik/My project/Assets/ass7.5.py"
False
True
PS C:\Users\harik\My project>
```

### Task 3 (Recursion Error – Missing Base Case)

Task: Analyze given code where recursion runs infinitely due to missing base case. Use AI to fix.

# Bug: No base case

```
def countdown(n):
    print(n)
    return countdown(n-1)
countdown(5)
```

Expected Output : Correct recursion with stopping condition

```
#Fixed Code:
def countdown(n):
    if n <= 0:
        print("Countdown finished!")
        return
    print(n)
    return countdown(n-1)
```

Output:

```
PS C:\Users\harik\My project> & C:/Users/harik/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/harik/My project/Assets/ass7.5.py"

### Task 4 (Dictionary Key Error)

Task: Analyze given code where a missing dictionary key causes error. Use AI to fix it.

# Bug: Accessing non-existing key

```
def get_value():
    data = {"a": 1, "b": 2}
```

```
return data["c"]
print(get_value())
```

Expected Output: Corrected with .get() or error handling.

```
# correct the above code with .get() or error handling.
def get_value():
    data = {"a": 1, "b": 2}
    return data.get("c", 0)
print(get_value())
```

Output:

```
PS C:\Users\harik\My project> & C:/Users/harik/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/harik/My project/Assets/ass7.5.py"

### Task 5 (Infinite Loop – Wrong Condition)

Task: Analyze given code where loop never ends. Use AI to detect and fix it.

```
# Bug: Infinite loop
def loop_example():
    i = 0
    while i < 5:
        print(i)
```

Expected Output: Corrected loop increments i.

```
def loop_example():
    i = 0
    while i < 5:
        print(i)
        i += 1
#correct the above code and handle the errors
def loop_example():
    i = 0
    while i < 5:
        print(i)
        i += 1
loop_example()
loop_example()
#Corrected loop increments i.
def loop_example():
    i = 0
```

```
#Corrected loop increments i.
def loop_example():
    i = 0
    while i < 5:
        print(i)
        i += 1
loop_example()
loop_example()
```

Output:

## Task 6 (Unpacking Error – Wrong Variables)

Task: Analyze given code where tuple unpacking fails. Use AI to fix it.

```
# Bug: Wrong unpacking
```

```
a, b = (1, 2, 3)
```

Expected Output: Correct unpacking or using `_` for extra values.

```
Go Run Terminal Help <- > Q AI Assistant coding
Lab4_1.py LAB7.PY Untitled-1 import socket.py Search Search
LAB7.PY > ...
1 """Task 6 (Unpacking Error [ Wrong Variables)

## Task 8 (Import Error – Wrong Module Usage)

Task: Analyze given code with incorrect import. Use AI to fix.

# Bug: Wrong import

```
import maths
```

```
print(maths.sqrt(16))
```

Expected Output: Corrected to import math

The screenshot shows a code editor window with the following details:

- File:** LAB7.PY
- Content:**

```
1 """Task 8 (Import Error) Wrong Module Usage
2 Task: Analyze given code with incorrect import. Use AI to fix.
3 # Bug: Wrong import
4 import maths
5 print(maths.sqrt(16))
6 Expected Output: Corrected to import math"""
7 import math
8 print(math.sqrt(16))
9
```
- Terminal:** Shows the command "python LAB7.PY" being run, resulting in the output "4.0".

**Output:**

```
PS C:\Users\CHAITRA REDDY\OneDrive\Desktop\AI Assistant coding> & "C:\Users\CHAITRA REDDY\AppData\Local\Microsoft\WindowsApps\python3.13.exe" "c:/Users/CHAITRA REDDY/OneDrive/Desktop/AI Assistant coding/LAB7.PY"
